

Digital Forensics for Civil Litigation

Expert Preservation,
Analysis & Testimony

Technology now records nearly every aspect of our lives, from our movements and messages to our behaviors and activities. This data can be pivotal in litigation.

Digital Forensics for Civil Litigation

At Envista, our certified digital forensics experts preserve and analyze data from computers, mobile phones, cloud platforms, vehicles, and GPS-enabled devices. We use industry-standard forensic tools and apply advanced validation techniques to ensure that our findings are both accurate and clearly communicated.

WHEN CAN DIGITAL FORENSICS HELP?

Our services are routinely used by a wide range of legal professionals handling cases including:

- Business Litigation
- Cybersecurity Attacks
- Employee Wrongdoing
- Employment Law
- Insurance Coverage Litigation
- Intellectual Property Theft
- Marine
- Personal Injury
- Product Liability
- Transportation

Digital evidence can confirm or challenge timelines, establish or undermine intent, and provide critical support in developing a strong trial strategy.

How Envista Can Help

Cell Phone Forensics

Cell phones store massive amounts of data, including calls, texts, emails, photos, app usage, and location history. Our experts recover both active and deleted data using leading forensic software. This evidence can help clarify timelines, assess usage prior to an incident, or support accident investigations and civil disputes.

Location Forensics

By examining call detail records (CDRs), GPS, Google location records, and other location evidence, we determine the likely location of a phone at key times. These insights are frequently used in accident reconstruction, workplace investigations, or verifying timelines in civil litigation.

Computer Forensics

We examine hundreds of computers, servers, and external devices each year. Whether it's recovering deleted files, reconstructing timelines, or identifying system use, we provide full support from early analysis through testimony. Our methods meet industry standards and ensure findings are validated.

Vehicle System Forensics

Modern vehicles store a wealth of digital data. Infotainment and telematics systems may log navigation routes, speed, gear shifts, phone calls, seatbelt usage, and door status. We extract and interpret this data to support accident reconstructions, identify driver behavior, assess vehicle use prior to a loss, and evaluate potential distractions, critical in insurance investigations and litigation involving commercial or passenger vehicles.
